

I am against letting the power companies enter into a new frontier for them, when they cannot guarantee continuous power to their customers now -- area blackouts and brownouts still prevail. Also, the interference from BPL is a serious potential problem with ALL emergency communications, as I understand the BPL frequency interference issue. Lastly, the noise from BPL could easily prevent my atomic clocks from working properly, rendering everyone's purchases of these devices useless ! STOP the power companies from using BPL -- the Federal government and the FCC should support/subsidize proven technology such as satellite high speed internet or cable TV internet connections.
